

PUTNEY & WOOD LTD

The Stonework Contractor | Contemporary | Traditional

PROJECT PROFILE: 71 Queen Victoria Street, EC4

- **Client:** MHBC
- **Architect:** SPARC
- **Main Contractor:** Bouygues
- **Stone used:** Basalt, Portland stone and Yorkstone
- **Value:** £418,000
- **Completed:** July 2014
- **Contract duration:** 3 months
- **Scope of work:**
Internal flooring, steps and wall cladding, and external paving

This redevelopment in the City of London created 187,060 sq. ft. of exceptional grade 'A' office space over eight levels. The project replaces the original façade with full-height, textured glass and a large scale entrance using Portland stone and Yorkstone paving.

Following a competitive tender process, Putney & Wood was awarded the stone contract by Bouygues the main contractor. The project included the installation of basalt floor tiling on two levels, limestone cladding to the walls in the two receptions and Yorkstone exterior paving. Restricted site access meant that logistics on this project had to be closely managed.

“Putney & Wood delivered a first class internal and external stone package. Their project team did a great job and I would happily work with them again”

Ben Tominey – Bouygues UK
